

# Endpoint-Threat-Protection

Unify prevention, detection, and response in a single platform

Over 95% of breaches originate on endpoints. Adapt your defences against the most advanced Cyber attacks by rapidly eliminating threats with fully-automated, integrated response capabilities.

## ADVANCED ENDPOINT PROTECTION

Dealing with today's Cyber threats requires a fundamentally different approach. Our technology uses a major breakthrough in signature-less detection, based on machine learning.

Organisations collectively face billions of highly sophisticated attacks across multiple vectors. Exposure to ransomware and Trojan attacks are not easy to defend against using traditional anti-virus software, and if they are discovered the legacy technology cannot respond quickly enough to the volume or difficulty of threats.

We closely monitor all system activities to identify malicious behaviour and mitigate threats in real time. What's more, the pro-active endpoint protection is switched on before your system even starts up, tracking and scanning all activity to take action when needed.

Don't become a victim of ransomware and stop targeted attacks before they even begin. Exponential-e's advanced Cloud-based protection causes no impact to performance, enables a multi-layered approach and provides the lowest total cost of operation (TCO) in the market.

## SENTINELONE PARTNERS WITH EXPONENTIAL-E

Exponential-e is the only MSSP in the UK providing fully managed security services using SentinelOne, the leading corporate endpoint protection technology platform, certified by AV-TEST as the replacement for anti-virus solutions and recognised for the best TCO per protected agent and highly effective Cyber Security.

NSS Labs rated SentinelOne as 'Recommended' in The NSS Labs Security Value Map, performing the industry's most rigorous test to date of leading Advanced Endpoint Protection (AEP) solutions. The integrated platform is compliant and proven with specific industries, recognised for ease of use and deployment.

Our security analysts constantly monitor for and respond to threats, able to perform remediation services where necessary to ensure your systems stay operational and free from threats. This response service leaves your internal teams free to concentrate on other more important tasks.

**A MULTI-LAYERED APPROACH**

Exponential-e’s multi-layered protection includes prevention, detection & response as a unified service. We provide the only platform that defends every endpoint against every type of attack, at every stage in the threat lifecycle - before, during and after an attack. Exponential-e’s ransomware protection service takes action as early as possible to deal with threats and alerts effectively. This is the next-generation for mitigation, by containing malware and endpoints as your protection enables automated processes such as rollback and auto-immunisation.

Automated, pro-active protection which is customisable

A fully automated, policy-driven response provides zero-touch mitigation for decisive incident response of all endpoint devices. This includes robust containment, full remediation & rollback as you can react to the alerts accordingly.

**PREVENTION**

Advanced Static Analysis using a Deep File Inspection engine discovers known and unknown malware. A global intelligence

base provides dynamic whitelisting and blacklisting with 31,000 unique file characteristics defined and referenced.

Detection

Behaviour-based threat analysis enables dynamic detection of anomalies and prevents the most advanced attacks from any vector. The solution includes context forensics in true real time and builds an intuitive attack storyline go visualise malicious behaviour.

**EASY TO DEPLOY AND SIMPLE TO MANAGE**

Adaptive defenses include settings for cloud intelligence and auto-immunisation. The solution can work in parallel with existing anti-virus software and is supported on all endpoint platforms such as Windows, MacOS, and Linux.

Simple deployment across enterprise-scale environments, roll out and onboarding enables you to begin customising how your service automates policies and settings.

A lightweight, autonomous agent causes no impact to performance continuously monitoring all activity on the user endpoint or server, online or offline.

**MONITORING**

---

Constant monitoring of all activity checks files and activity against policies to apply the intelligent defenses available. Both static and dynamic analysis includes deep file inspection and behaviour-based detection to uncover known and unknown threats across any vector.

The endpoint protection platform detects common threats to national-grade advanced persistent threats (APTs).

**MALWARE**

---

Ransomware, Trojans, worms, backdoors

File-less / Memory-based malware

**EXPLOITS**

---

Document-based exploits

Browser-based exploits

**LIVE/ INSIDER ATTACKS**

---

Script-based: Powershell, Powersploit, WMI, VBS

Credentials: credential-scraping, Mimikatz, tokens

## RESPONSES

Policy-driven responses close the gap between detection and mitigation.

Options to include cloud-based global intelligence, what actions to take and how to alert IT personnel, and whether to disconnect from the Network and contain or decommission devices all reduce risk.

Organisations are now adding new, behaviour-based endpoint security solutions to prevent advanced threats that aren't detected at the network level. The solution provides next-generation technology and a multi-layered approach to unify endpoint protection.

## SOLUTION

The solution acts on attacks post execution should an attack successfully take place on one or more endpoints. Many technologies today are focused on identifying and alerting to the existence of a threat. This sends incident response personnel into a scramble attempting to find and quarantine infected systems.

Machine-speed mitigation and remediation is critical, if not the organization remains vulnerable. Our protection service stops lateral spread with containment and eliminates it from affected devices to fully mitigate and remediate threats.

## FEATURES

- Multi-layered approach
- Fully automated response
- Protects user endpoints AND data centre servers
- Monitors threats in real-time
- Adapts against latest attacks
- Complete and insightful visibility
- Easy to deploy and simple to manage

## BENEFITS

- Superior Cyber Security with proactive threat detection
- No impact to performance
- Reduce costs up to 75%
- Up to 5x lower TCO
- Simplify security management and compliance
- Save operational time and resources
- Peace of Mind

**EXPO.e** is a Cloud, Connectivity and Communications pioneer with a difference.

From launching the world's first Virtual private LAN in 2006 on our privately-owned 100GigE secure and super-fast Network to our recent launch of the world's first Software Defined Digital Platform (SD-DP), our commitment to innovation has resulted in us being recognised as one of the fastest-growing private companies in the UK, with 9 ISO accreditations to our name.

We have an extensive solutions portfolio that enables us to create services tailored specifically to our customers' operational needs whether that be for Private, Public or Hybrid Cloud, Data Centre, Unified Communications, Cyber Security or Managed IT Services.

Whether it's for a single service or transformative solution, we deliver Peace of Mind-as-a-Service to our customers: that's why we are trusted by over 3,000 customers, with 96% reference-ability and an **industry-leading Net Promoter Score**.
