

2103-EXPO.e PSoGEA-connectivity

Fast, future-proof, and affordable broadband-only connections, with no need for a landline

Part of Exponential-e's Smart Wires ecosystem, SoGEA offers high-performance ethernet access without requiring a separate PSTN line. By delivering voice services via the router, rather than a wall socket, broadband speeds are fully optimised, with the capacity to accommodate even the most data-intensive services.

FEATURES

- Coverage available at more than 28.5 million premises
- Alarmed cabinets, which automatically alert an engineer in the event of an outage
- IP voice services also available
- Fixed price structures, for clear, simplified billing
- Extension wiring (for on-premises alarms etc.) can be retained

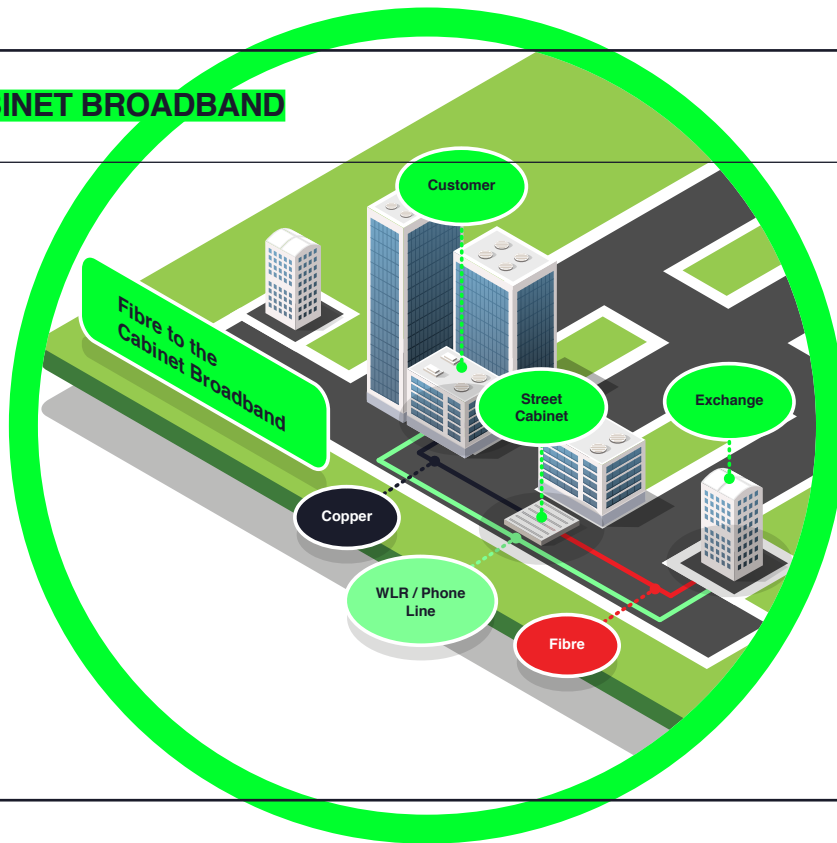

BENEFITS OF SOGEA

- **Optimal performance**, with maximum speeds of 80Mbps download and 20Mbps upload
- **Faster deployment times**, with no need to purchase a landline, high-performance broadband can be installed during a single visit, via a single order
- **A highly resilient solution**, with a fibre-based service ensures continued service if the copper-based connection between the cabinet and exchange is damaged
- **A futureproof solution** that will not require costly and time-consuming migration projects, following the planned PSTN shutdown in 2025, and will allow all existing phone numbers to be retained, in line with Ofcom regulations

FULL VISIBILITY & CONTROL OF YOUR CUSTOMERS INTERNET SERVICE

- 0.5Mbps symmetric, for use as replacement voice line or telemetry line
- Up to 40Mbps downstream and 10Mbps upstream
- Up to 55Mbps downstream and 10Mbps upstream
- Up to 80Mbps downstream and 20Mbps upstream
